

1. Double layered paper sheet control

Double-layered paper sheets should be differentiated from single sheets. For this purpose a contrast sensor type **SPECTRO-1-FIO** in connection with an optical fiber type **D-S-A2.0-(2.5)-1200-67°** and a mechanical fixture for the optical fiber type **KL-0/90°-22-A2.0** are used. As shown in the screenshots even more than two sheets can be proper detected.
