

Application - News N°779 COAST series

Instruments

1. Color-gloss control of lacquered metal sheets

Lacquered metal sheets should be controlled in regards to the color and gloss. For this purpose, a color-gloss-structure sensor type **COAST-56-45°-VIS-IR4** is used. At this, the distance of the sensor to the object is approximately 56mm and the detecting range at this distance is around 20mm. The lacquered metal sheets can be proper detected as shown in the screen shots.
