

1. Metal strip height control type FLB-MSHC-1020

The metal sheet height limit control system **FLB-MSHC-1020** can be used e.g. in the stamping technology especially in connection with unwinders and rewinders. The detecting range is approximately 950mm, 24 light barriers are arranged at a distance of 40mm to each other (exceptions build the outer light barriers: 55mm to the direct neighbor). The system delivers an analog voltage (0V ... +10V) as well as current (4mA ... 20mA) signal. At this, the maximum distance between transmitter and receiver is 200mm.
