SPECTRO Series

SPECTRO-3-FIO-ANA-XL

- Big measuring range: typ. 10 mm ... 100 mm (with add-on optics)
- For use with special fiber optics, available in different lengths
- Up to 3 colors (max. 64 in group mode) can be stored
- RS232 interface (USB or Ethernet adapter available)
- Super-bright white-light LED (AC-/DC-operation or OFF for luminous objects can be switched)
- Color detection, contrast detection, and gray scale detection
- Insensitive to outside light (in AC- or PULSE-operation)
- Brightness correction can be activated (STAT/DYN)
- Scan frequency max. 90 kHz (in DC- or OFF-operation)
- Switching frequency typ. 60 kHz
- 3 analog outputs to output color values to PLC
- 2 digital outputs to output taught colors
- TEACH via PC or PLC (external input)
- Various evaluation algorithms can be activated
- "BEST HIT" mode ("human color assessment")
- Parameterizable via Windows® software, scope function
- Temperature compensated
- Averaging can be activated (from 1 up to over 32000 values)
- Color control of luminous objects (LEDs, halogen lamps, displays, ...)
- 3-color filter detector (true color detector: "human color perception")

Product name:
SPECTRO-3-FIO-ANA-XL
(incl. Windows® PC software SPECTRO3-ANA-Scope)

For transmitted light operation:
T-S-M5.0-(2.5)-(length*)-67°
Transmitted light fiber optics
T-S-M5.0-(5.0)-(length*)-67°
or in case of reflected light operation:
T-S-M8.0-(8.0)-(length*)-Y-M5.0/M5.0-67°

For reflected light operation:
T-S-M8.0-(8.0)-(length*)-Y-M5.0/M5.0-67°
Reflected light fiber optics
KL-M18-XL-M8.0 Optical frontend for T-S-M8.0-...-67°
KL-M34-XL-M8.0 Optical frontend for T-S-M8.0-...-67°

*length (in mm):
1200, 2000, 3000, 4000, 5000, or 10000

Connection via RS232 interface at the PC:
Connecting cable:
- cab-las4/PC-(length)
- cab-las4/PC-w-(length) (angle 90°)
  (standard length 2m)

alternative:
Connection via USB interface at the PC:
Connecting cable (incl. driver software):
- cab-4/USB-(length)
- cab-4/USB-w-(length) (angle type 90°)
  (standard length 2m)

alternative:
Connection to local network via Ethernet bus:
Adapter (incl. software „SensorFinder“):
- cab-4/ETH-500
  (standard length 0.5m)

Optional: External CAT5 cable, e.g.
- cab-eth/M12D-RJ45-flx-(length)

- cab-4/ETH-500
  (length 0.5m, outer jacket: PUR)
  4-pole M12 fem. conn. (D-coded) for connection of an external CAT5 cable, e.g.
  - cab-eth/M12D-RJ45-flx-(length)

- cab-4/USB-... or
  - cab-4/USB-w-... (no picture)
  (each max. length 5m, outer jacket: PUR)

- cab-las8/SPS-...
  (max. length 25m, outer jacket: PUR)

- cab-las8/SPS-w-...
  (max. length 25m, outer jacket: PUR)
Measuring principle of color sensors of SPECTRO-3-ANA series:

The SPECTRO-3-ANA color sensor provides highly flexible signal acquisition. For example, the sensor can be operated in alternating-light mode (AC mode), which makes the sensor insensitive to extraneous light. It also can be set to constant-light mode (DC mode), which makes the sensor extremely fast. An OFF function turns off the integrated light source at the sensor and changes to DC operation. The sensor then can detect so-called "self-luminous objects". With the stepless adjustment of the integrated light source as well as the selectable gain of the receiver signal and an INTEGRAL function the sensor can be set to almost any surface or any "self-luminous object".

When the integrated light source of the SPECTRO-3-ANA color sensor is activated, the sensor detects the radiation that is diffusely reflected from the object. As a light source the SPECTRO-3 color sensor uses a LED with adjustable transmitter power. An integrated 3-fold receiver for the red, green, and blue content of the light that is reflected from the object, or the light that is emitted by a "self-luminous object", is used as a receiver.

The color sensors of the SPECTRO-3-ANA series can be taught up to 3 colors that are provided directly at the outputs, and up to 64 colors that are output by means of grouping. For each of these taught colors it is possible to set tolerances. In "X Y INT - 2D" or "s i M - 2D" mode these tolerances form a color cylinder in space. In "X Y INT - 3D" or "s i M - 3D" mode the tolerances form a color sphere in space. Color evaluation according to "s i M - 2D" is based on the lab calculation method. All modes can be used in combination with several operating modes such as "FIRST HIT" and "BEST HIT". Raw data are represented with 12 bit resolution.

As a special feature the sensor can be taught two completely independent parameter sets. Input IN0 can then be used to tell the sensor which parameter set it should work with. Color detection either operates continuously or is started through an external PLC trigger signal. The respective detected color either is provided as a binary code at the 2 digital outputs or can be sent directly to the outputs, if only up to 2 colors are to be detected.

In addition to the 2 digital outputs there also are 3 analog outputs that either provide the red, green, and blue components or the calculated color coordinates (X, Y, INT or s, i, M) in values of 0...+10V or 4...20mA.

Through input IN0 (green wire of the cab-las8/SPS cable) the color sensor can be taught up to 3 colors (max. 64 colors in group mode). For this purpose the corresponding evaluation mode must be set with the software.

Parameters and measurement values can be exchanged between a PC and the SPECTRO-3 color sensor through the serial RS232 interface. All the parameters for color detection also can be saved to the non-volatile EEPROM of the SPECTRO-3-ANA color sensor through this serial RS232 interface. When parameterisation is finished, the color sensor continues to operate with the current parameters in STAND-ALONE mode without a PC.

Possible firmware updates can be easily performed through the RS232 interface, even with the sensor system in installed condition.

The sensors of the SPECTRO-3-ANA series can be calibrated (white-light balancing). Balancing can be performed to any white surface. A ColorCheckerTM table with 24 color fields is available as an alternative. White-light balancing or calibration can be performed to one of the white fields.

As a light source the SPECTRO-3-ANA-UV color sensor uses a UV-LED (365 nm or 375 nm) with adjustable transmitter power to excite the luminescent marking. These UV sensors can be optimally adjusted to almost any luminescent colorant that can be excited in the long-wave UV range (365 nm or 375 nm).

The UV sensors of the SPECTRO-3-ANA series also can be calibrated. Analogous to white-light balancing with color sensors, balancing of the SPECTRO-3-ANA-UV sensors could be performed to any luminescent color marking.
Parameterization

Windows® user interface:
(The current software version is available for download on our website.)

The color sensor is parameterized under Windows® with the SPECTRO3-ANA-Scope software. The Windows® user interface facilitates the teach-in process at the color sensor and supports the operator in the task of adjustment and commissioning of the color sensor.

Under Windows® representation of the color value on a PC in numeric form and in a color chart, and representation of RGB values in a time chart. In addition the current RGB values are displayed as a bar chart.

The RS232 interface (tab PARA1 or PARA2) is used for setting parameters such as:

- **POWER MODE:** Light power of the LED
- **LED MODE:** Triggering of the internal light source
- **GAIN:** Used for setting the gain of the receiver
- **AVERAGE:** Averaging over a maximum of 32768 values. This function field is used for adjusting the number of scanning values (measurement values) over which the raw signal measured at the receiver is averaged. A higher AVERAGE default value reduces noise of the raw signals at the receiver unit and there will be a decrease of the maximal available switching frequency of the sensor
- **INTEGRAL:** This function field is used to set the number of scan values (measurement values) over which the raw signal measured at the receiver is summed up. This integral function allows the reliable detection even of extremely weak signals
- **ANA LOG OUTMODE:** Function to determine the signals that the sensor provides at its analog outputs (OUT2, OUT3, OUT4) (RGB, XY INT, sIM, RGB MM, or sIM REF)
- **DIGITAL OUTMODE:** Control of the 2 digital outputs (OUT0, OUT1)
- **MAXCOL-No.:** Number of colors to be checked
- **INTLIM:** Minimum intensity required for color evaluation
- **EVALUATION MODE:** Various evaluation modes to choose from (FIRST HIT, BEST HIT, MIN DIST, COL2, THD Red Green, THD Red Blu, or THD Green Blue)
- **CALCULATION MODE:** There are 2 methods of teaching a color: "XY INT - 3D" (or "sIM - 3D") uses a color sphere in space with radius TOL. Contrary to this, "XY INT - 2D" (or "sIM - 2D") uses a color cylinder in space with radius CTO or sIT0 and with height ITO or M.
- **EXTEACH:** In all the evaluation modes teaching of a color can be performed externally through IN0.
- **TRIGGER:** Continuous or external or self trigger.
The software „Firmware Loader“ allows the user to perform an automatic firmware update. The update will be carried out through the RS232 interface.

An initialisation file (xxx.ini) and a firmware file (xxx.elf.S) are required for performing a firmware update. These files can be obtained from your supplier. In some cases an additional firmware file for the program memory (xxx.elf.p.S) is also needed, and this file will be automatically provided together with the other two files.
Fiber optics for transmitted light operation:
(please order separately)

T-S-M5.0-(2.5)-(length)-67° or
T-S-M5.0-(5.0)-(length)-67°
(transmitted light fiber optics for transmitter side of sensor)

T = Transmitted light operation
S = Silicone metal sheath
M5.0-(2.5) = Sensor head type M5.0 with fiber bundle Ø 2.5 mm (on both sides)
M5.0-(5.0) = Sensor head type M5.0 with fiber bundle Ø 5.0 mm (on both sides)
Length = 1200 / 2000 / 3000 / 4000 / 5000 / 10000 = total length in mm
(please select the required length)
67° = Beam opening angle

T-S-M5.0-(5.0)-(length)-67°
(transmitted light fiber optics for receiver side of sensor)

T = Transmitted light operation
S = Silicone metal sheath
M5.0-(5.0) = Sensor head type M5.0 with fiber bundle Ø 5.0 mm (on both sides)
Length = 1200 / 2000 / 3000 / 4000 / 5000 / 10000 = total length in mm
(please select the required length)
67° = Beam opening angle

Add-on optics for transmitted light fiber optics T-S-M5.0-...
(please order separately)

KL-M34-M5.0
(add-on optics)
suitable for
transmitter-side fiber optics type T-S-M5.0-(2.5)-...-67° (or T-S-M5.0-(5.0)-...-67°)
for receiver-side fiber optics T-S-M5.0-(5.0)-...-67°

KL-M34-XL-M5.0
(add-on optics)
suitable for
transmitter-side fiber optics type T-S-M5.0-(2.5)-...-67° (or T-S-M5.0-(5.0)-...-67°)
and at the same time for receiver-side fiber optics T-S-M5.0-(5.0)-...-67°

KL-M18-XL-0°/(17°-60°)-30-M5.0
(optical frontend with adjustable angle from 17° to 60°,
distance of fiber optics to measuring object 30 mm)
suitable for
transmitter-side fiber optics T-S-M5.0-(2.5)-...-67° (or T-S-M5.0-(5.0)-...-67°)
and at the same time for receiver-side fiber optics T-S-M5.0-(5.0)-...-67°
Fiber optics for reflected light operation:
(please order separately)

**T-S-M8.0-(8.0)-(length)-Y-M5.0/M5.0-67°**
(reflected light fiber optics in Y shape)

- **T** = Transmitted light operation
- **S** = Silicone metal sheath
- **M8.0-(8.0)** = Sensor head type M8.0 with fiber bundle Ø approx. 7.8 mm
- **length** = 1200 / 2000 / 3000 / 4000 / 5000 / 10000 = total length in mm
  (please select the required length)
- **Y** = Y version
- **M5.0/M5.0** = Sensor head type M5.0-(2.5) (connection at transmitter side) und
  Sensor head type M5.0-(5.0) (connection at receiver side)
- **67°** = Beam opening angle
Add-on optics for reflected light fiber optics T-S-M8.0-(8.0)-(length)-Y-M5.0/M5.0-67°:
(please order separately)

**KL-M18-XL-M8.0**
(Add-on optics)
suitable for mounting at the M8.0 section of fiber optics
T-S-M8.0-(8.0)-...-Y-M5.0/M5.0-67°

**KL-M34-XL-M8.0**
(Add-on optics)
suitable for mounting at the M8.0 section of fiber optics
T-S-M8.0-(8.0)-...-Y-M5.0/M5.0-67°
